## Projects

1. **PropertyHomieRocco** - Its a Real-estate Agent website. In this website, an user can get to know about the real-estate agent and his services. Besides, they can have a look into multiple property listings of him. There is a contact form whereas an user can contact with the agent for any property query.

**Technology used:** React , React npm packages, JSON Web Token , Firebase, swiperJs, Tailwind CSS, DaisyUI, NodeJs, MongoDB and so on.

**Live Link:** <https://property-homie-rocco.web.app/>

2. **Wheelanes** - A car resale platform whereas, buyer,seller and admin - three roles are available for different functionalities in that website. Buyer can see featured cars,different types of cars and can book a car for meeting up with the seller and to have a look of that car for real .The most important part is the seller account which contains adding up new cars and managing them if it is booked or not. A special feature is that a seller can see the active status of his car. Moreover,he can advertise any car with just one click. The admin account handles all sellers and buyers.

**Technology used:** React , React npm packages,JSON Web Token, Firebase, swiperJs, Tailwind CSS, DaisyUI, NodeJs, MongoDB and so on.

**Live link:** <https://wheelanes-2a34c.web.app/>

1. **P-learning** - It is an e-learning website for students of any field. A student can search for a course and get to know about its details. Anyone can enroll in any course. Besides, a user can download the pdf format of any course details.

**Technology used:** React, React Icons, JsPDF, React Slick, React to PDF, React-Hot-Toast, Firebase, Bootstrap, NodeJs, MongoDB and so on.

**Live Link:** <https://p-learning.netlify.app/>
